

Time saver, easy & clever way to remove AIRLOCKS / BUBBLES in the cooling system

- The Universal Coolant Filling Kit is designed to quickly and easily connect to most cooling systems and provides a sealed filling system with additional head to help purge air locks.
- The funnel assembly is placed into the coolant fill port and hand-tightened to expand the seal. There is a mesh filter at the base of the funnel and a lever to isolate the funnel contents so that the coolant flow can be stopped when the system is full.
- To ensure a fitment for a large number of makes and models, the kit come with adapters (31mm, 35mm, 40mm, 42mm and 45mm) and a cone design that fits many Japanese cars.
- A clever design that makes an awkward job quick and easy and reduces coolant spillage.
