

# SST48 Portable Side Slip Tester

- Avoid tyre wear
- Check wheel side slip on any level surface
- Test accurately in only 5 minutes
- Easily understood
- Virtually indestructible
- No maintenance require
- Minimum investment maximum returns
- Portable, no need to have a side slip testing bay
- No special testing skill require
- Weight / Material : 1kg / ABS high impact plastic
- Dimension : 47cm x 27cm x 2cm

# SST48 Portable Side Slip Tester

SST48 is the simplest yet probably, the most accurate device in the market for checking the alignment of the adjustable wheels of cars or vans, is sold to professional fleet users, but is just as useful to private motorists.

SST48 is a roller bearing platform over which one front wheel is slowly driven with the wheels in their straight ahead, i.e. least stressed position. Because of the roller bearings between the base and top plate of the SST48, any sideways stress between the tyre and the road surface will cause the top plate to move sideways. This movement is linked to a pointer which shows if adjustment is needed and in which direction.

It is not even necessary to know the toe-in or toe-out angle needed for the vehicle. If the correct angle is set there is no sideways stress between wheel and road, and the indicator will show "0".

For the private motorist, the professional user or the fleet operators, the fact that tests can be conducted in minutes on any level surface, means tyre wear can be avoided as even a daily check is feasible. Equally important, because the results are so clear and SST48 is so simple to use, no special training is required.
